  No further data; see item 2.

· Additional information:
  The lists that were valid during the compilation were used as basis.

· Personal protective equipment

· General protective and hygienic measures
  The usual precautionary measures should be adhered to in handling the chemicals.
  Instantly remove any soiled and impregnated garments.
  Wash hands during breaks and at the end of the work.
  Do not inhale gases / fumes / aerosols.
  Avoid contact with the eyes and skin.
  Do not eat, drink or smoke while working.

· Breathing equipment:
  Not necessary if room is well-ventilated.

· Protection of hands:
  Solvent resistant gloves
  The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
  Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
  · Material of gloves
    The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
    Fluorocarbon rubber (Viton)
    Recommended thickness of the material: ≥ 0.5 mm
  · Penetration time of glove material
    The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.
    The determined penetration times according to EN 374 part III are not performed under practical conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is recommended.

· For the permanent contact in work areas without heightened risk of injury (e.g. Laboratory) gloves made of the following material are suitable:
  Fluorocarbon rubber (Viton)

· Eye protection:
  Safety glasses recommended during refilling.
